

FRIGO
JUNIOR

Frigo-Junior company was founded in 2003 in Arilje at region with a long tradition in fruit production as family company of the Nikolić family, boasting thirty years of experience in primary raspberry production.

Frigo - Junior cold storage is located at the center of high-quality raspberry, blackberry and plum farms, with famous geographic raspberry origin of Arilje. The purchase of fresh fruit is organized within only 10 km around the cold storage, thus creating the preconditions for delivering the best quality raw material to the cold storage. The fruit is frozen immediately after harvest, within an optimal time period, which is a guarantee of high-quality final IQF product and which preserves all organoleptic properties and nutritional value of fruit.

As we always strive to provide high quality, safe and healthy products to our customers, we strictly control all stages of production, from primary production, control of raw material receipt, control of freezing, sorting, packaging processes to delivery of finished products.

We are continually educating our fruit producers about good agricultural practice, integral fruit protection (controlled use of fertilizers and pesticides) and harvesting hygiene in order to produce quality and healthy fruit.

All stages of production are in line with the requirements of global food safety standards, starting from primary production and the application of Global G.A.P, then BRC and IFS standards. We are EOS and NOP certified for organic production.

We care about every single berry and every single person

Following the trends and increasing market demands for organic products, in 2017 Frigo-Junior started its own organic raspberry farms on a surface area of 4 ha in an ecologically healthy environment at an altitude of over 1000m above sea level.
